Quality Tools Since 1872

Back in 1872 Seymour Manufacturing was a premier manufacturer of wagon wheels and hubs. In the late 1800's they adapted to meet the growing demand for scythes with grain cradles.

The wagon wheel business is gone and scythes are rare, but Seymour is stronger than ever building quality hand tools for a wide range of home, farm, commercial, and industrial applications.

Seymour and Structron brand tools

Realizing that many future tools would have fiberglass handles, Seymour Manufacturing acquired Structron brand tools in 1995. Strength tests prove that these premium quality fiberglass handle tools are the strongest on the market.

Pioneering in both hardwood and fiberglass handle tools has made "Quality Tools Since 1872" and "First in Fiberglass" more than just clever slogans. They represent our commitment to continue to push the boundaries of technology in products, manufacturing, and customer service.

GOOD-BETTER-BEST product families

Seymour provides three basic quality levels in both fiberglass and hardwood handle tools. All are designed to provide the end-user with the best overall value at each quality level. We do this by carefully matching the design components with the demands and frequency of use of the intended applications.

Fiberglass handle tool families

- STRUCTRON® best quality
- PROFESSIONAL better quality
- DuraLite™ good quality

Wood handle tool families

- INDUSTRIAL best quality
- PROFESSIONAL better quality
- VALUE*PLUS™ good quality

Seymour striking tools and replacement handles

In addition to lawn and garden tools, Seymour has a complete line of striking tools and a complete line of replacement handles.

Seymour striking tools include drilling, cross peen, engineers, and sledge hammers; axes, splitting mauls, and wedges; picks and mattocks; and bars, tampers, and SuperScraper™ scraping tools.

The Link Handle Division makes replacement handles for striking tools such as axes, sledges, picks, and hammers as well as agricultural tools such as shovels, rakes, and hoes. These replacement handles are made from American hickory, American ash, other hardwoods, and fiberglass.

FIRST IN FIBERGLASS

Since 1979 Structron® brand products have lead the industry in fiberglass handle tools. The first Structron tool, the Superhandle® extension handle, pioneered the use of fiberglass strands and continuous strand mats to produce lightweight, extra-strong tubular handles. This technology lead to Structron brand tools, the first-ever line of premium quality, high performance fiberglass construction, landscaping, and gardening tools.

Extra-large D-grip handle

Designed to offer more room for gloved hands, the solid polypropylene grip is light weight yet durable. Resists heat and cold. Held in place with a steel rivet.

FIRST IN QUALITY

Structron brand tools were the first to incorporate a solid fiberglass compression rod, the PowerCore™, in the tool handle for extra strength. We were also the first to use an extra-large steel connecting ferrule, the exclusive PermaGrip® steel collar for greater durability. And Structron tools were the first to use the ProGrip™ comfort grip for better grip and added comfort.

PowerCore™ solid fiberglass reinforcing rod

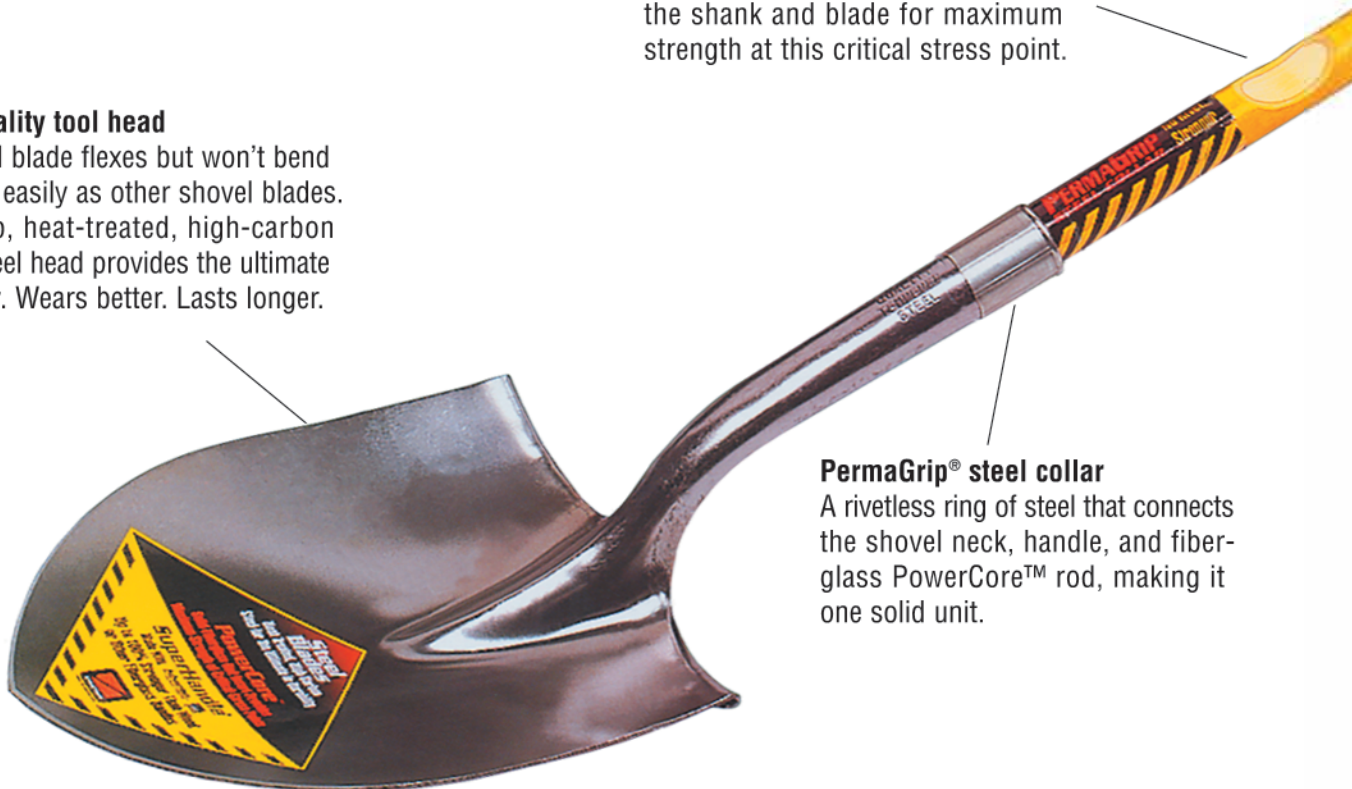

Extends 12.5 inches from the handle into the shank and blade for maximum strength at this critical stress point.

Highest quality tool head

Spring steel blade flexes but won't bend or break as easily as other shovel blades. Extra-sharp, heat-treated, high-carbon stamped steel head provides the ultimate in durability. Wears better. Lasts longer.

PermaGrip® steel collar

A rivetless ring of steel that connects the shovel neck, handle, and fiberglass PowerCore™ rod, making it one solid unit.

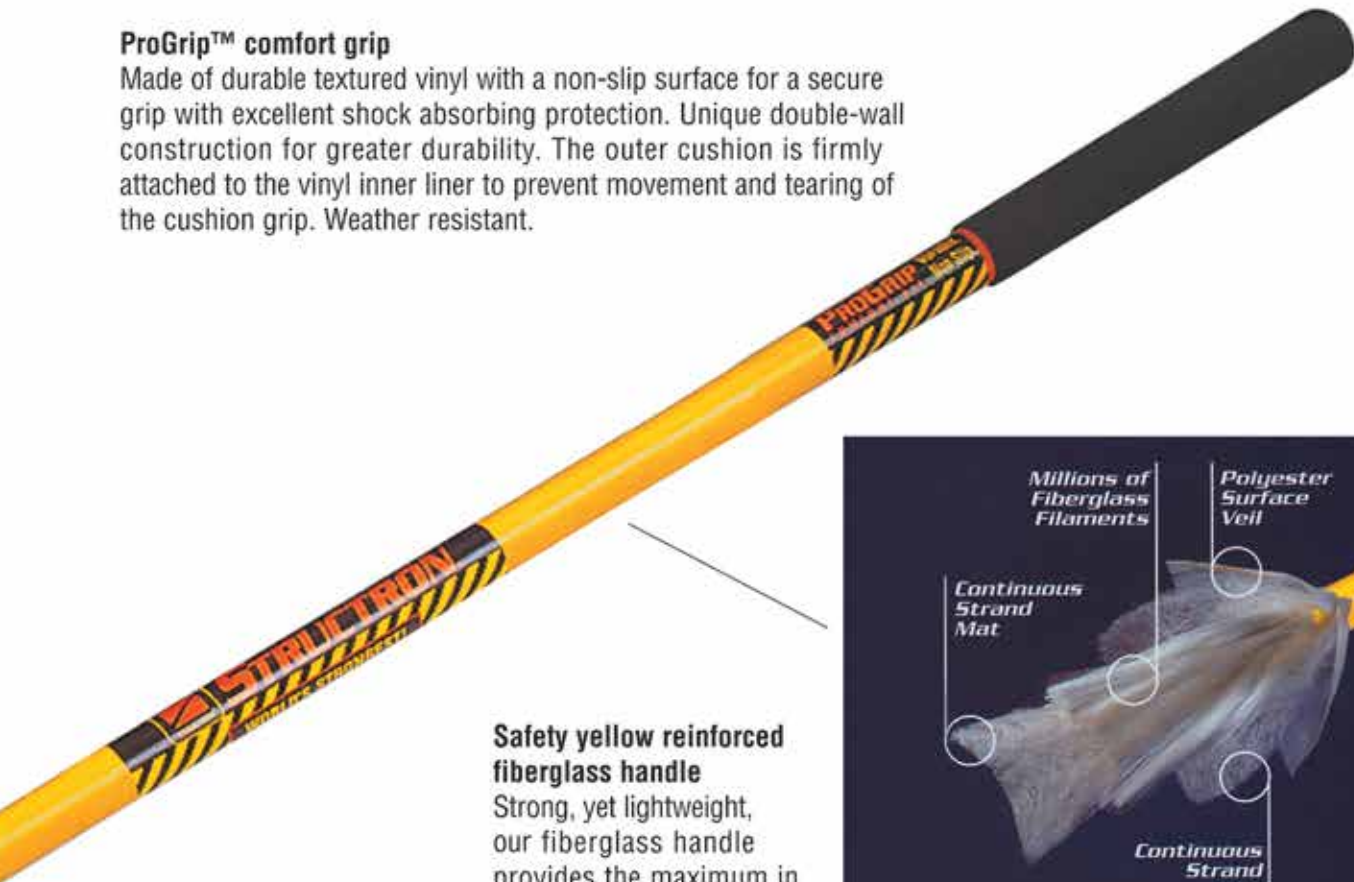

SEYMOUR

SUPERIOR HEAVY-DUTY TOOLS

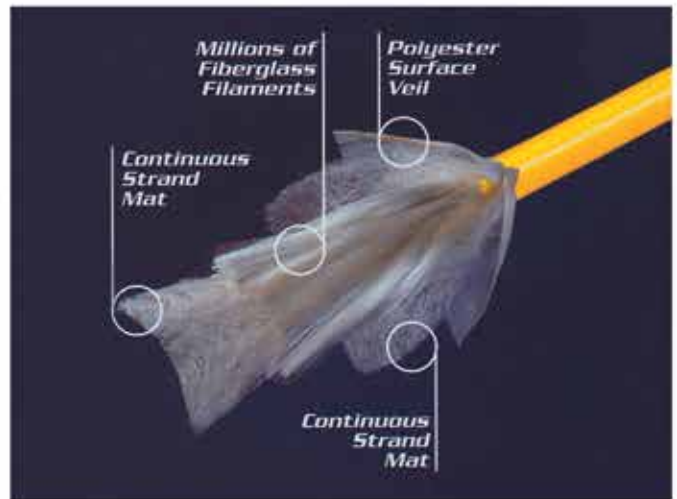

STRUCTRON

ProGrip™ comfort grip

Made of durable textured vinyl with a non-slip surface for a secure grip with excellent shock absorbing protection. Unique double-wall construction for greater durability. The outer cushion is firmly attached to the vinyl inner liner to prevent movement and tearing of the cushion grip. Weather resistant.

Safety yellow reinforced fiberglass handle
Strong, yet lightweight, our fiberglass handle provides the maximum in durability and visual impact.

FIRST IN TECHNOLOGY

We continually test our products and improve our technology to ensure that Seymour and Structron brand tools are the strongest available at each price point and quality level. State-of-the art

manufacturing methods keep production costs as low as possible. And when combined with quality component parts, Seymour customers receive the best tool value money can buy.

TOOL BRAND	POUNDS TO FAILURE	MODE OF FAILURE
Structron	250	Head
Brand A	200	Head
Brand B	193	Head
Brand C	108	Handle
Brand D	216	Head

In this actual test, the Structron shovel was 25% stronger than Brand A, 29% stronger than Brand B, 131% stronger than Brand C, and 16% stronger than Brand D.

STRUCTRON® brand fiberglass handle tools

The most rugged fiberglass handle tools available for maximum duty construction, industrial, and commercial applications.

Structron brand 700 series shovels and spades feature heat-treated, high-carbon polished steel or forged blades for the ultimate in durability.

Structron brand 600 series shovels and spades feature tempered, heavy-duty 14 gauge blades finished with a protective coating.

The 700 and 600 series tools both use the same extra-strong Structron fiberglass handles.

14 gauge shovel heads

Spring steel shovel blades flex but won't break as easily as other shovel heads. Wears better and lasts longer.

Closed back shovel heads have welded back plates to prevent material build-up. These plates also provide extra strength.

PowerCore™ solid fiberglass reinforcing rod extends 12.5 inches from the handle into the shank and blade for maximum strength at this critical stress point.

Forged rake and hoe heads provide the added strength needed for maximum duty applications.

STRUCTRON® brand garden spades & drain spades

Garden spades are used to turn soil in flower and vegetable gardens. Can also be used for edging along flower beds, walks, and drives.

Drain spades are used to dig and clean out narrow spaces. Also used to transplant nursery stock and bushes.

STRUCTRON® forged-head solid-shank shovels and spades

Forged-head solid-shank tools are ideal for the heaviest-duty industrial applications.

To make these rugged tools, the head, shank, and socket are all forged from a single piece of bar steel. A solid steel section (shank) in the neck joins the blade and the socket and provides maximum strength at this critical stress point.

Forged heads are heavier and thicker than stamped heads, so they don't need a frog in the blade and thus won't collect and hold material. The thicker forged blades wear longer than stamped blades.

Rugged forged-head solid-shank design.

The head, shank, and socket are all forged from a single piece of bar steel for exceptional strength and long life. They are ideal for heavy-duty contractor and industrial applications. They feature the world's strongest fiberglass and American ash handles.

SEYMOUR® forged-head solid-shank shovels and spades

The best tools cost less in the long run.

Cheap tools are never a bargain. They will break and need to be replaced when you need them most. When you buy Seymour and Structron premium forged-head solid shank tools, you are getting the world's best tools. They won't let you down.

Best handles in the business for forged tools.

Strong tools need strong handles as well as well as strong heads. Seymour handles are the best you can buy on forged-head tools.

PROFESSIONAL fiberglass handle tools

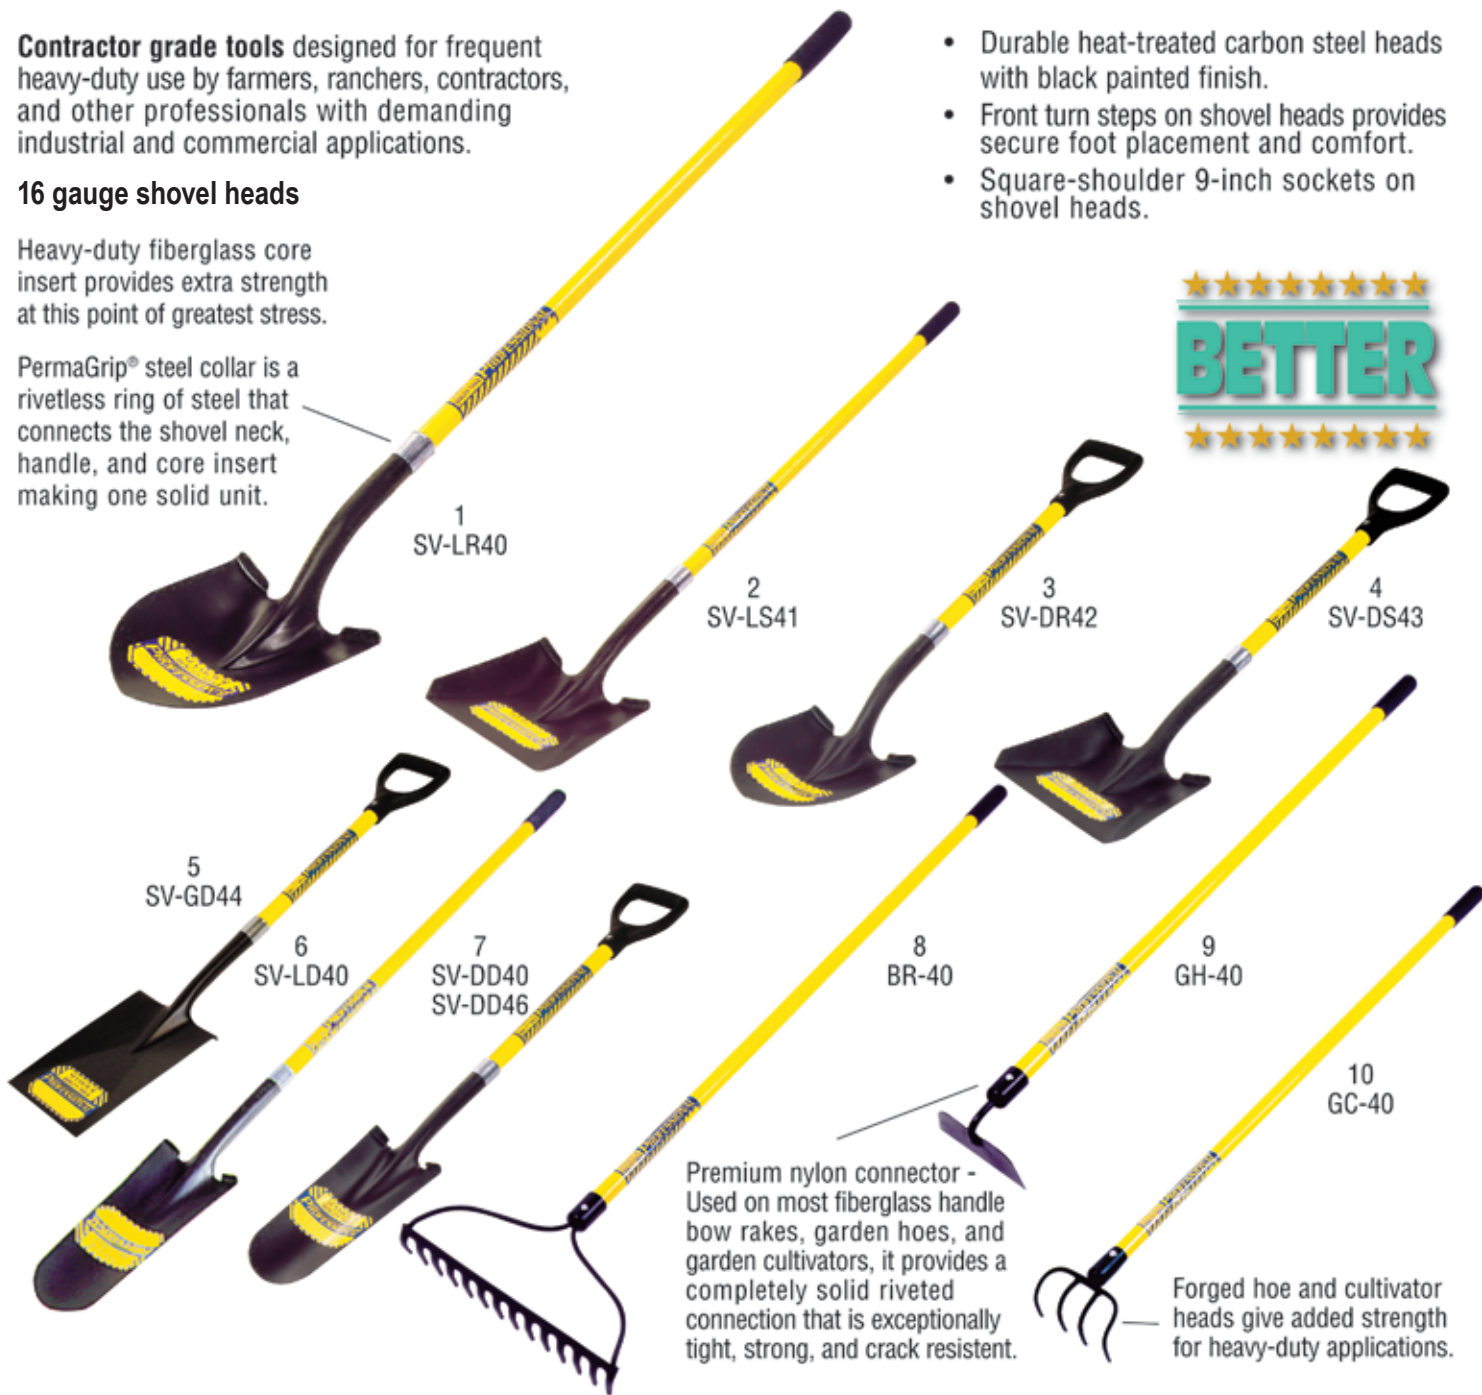

Contractor grade tools designed for frequent heavy-duty use by farmers, ranchers, contractors, and other professionals with demanding industrial and commercial applications.

16 gauge shovel heads

Heavy-duty fiberglass core insert provides extra strength at this point of greatest stress.

PermaGrip® steel collar is a rivetless ring of steel that connects the shovel neck, handle, and core insert making one solid unit.

- Durable heat-treated carbon steel heads with black painted finish.
- Front turn steps on shovel heads provides secure foot placement and comfort.
- Square-shoulder 9-inch sockets on shovel heads.

Premium nylon connector - Used on most fiberglass handle bow rakes, garden hoes, and garden cultivators, it provides a completely solid riveted connection that is exceptionally tight, strong, and crack resistant.

Forged hoe and cultivator heads give added strength for heavy-duty applications.

Homeowner grade tools with features usually found only on more expensive tools. They provide exceptional value in an economical line of fiberglass handle tools designed for homeowner and other occasional use applications.

16 gauge shovel heads

Durable heat-treated carbon steel heads with clear lacquer finish.

PermaGrip® steel collar adds strength and stays tight.

- Square-shoulder 9-inch sockets on shovel heads.
- Front turn steps on shovel heads.
- Welded rake and hoe heads provide value and economy for homeowner applications.
- Red fiberglass handles with black vinyl grips.

DuraLite® fiberglass handles use solid hardwood core inserts to provide extra strength at the point of greatest stress.

Economy grade tools providing basic hand tools at minimum cost. The Seymour 90 Series is a promotional line of tools designed for occasional use applications where low cost is the primary consideration.

- **16 gauge shovel heads**
- Rear rolled steps on shovel heads
- Square-shoulder, 9-inch sockets on shovel heads.

Black metal D-grips for comfort and a secure grip.

Contoured hardwood shovel handles and straight rake and hoe handles with clear lacquer finish.

Welded rake and hoe tool heads provide value and economy for homeowner applications.

Durable heat-treated carbon steel heads with clear lacquer finish.

Bow rakes have slightly rounded teeth for gathering stones and large weeds and for seedbed preparation. The bow provides some spring to reduce fatigue.

SEYMOUR® & STRUCTION® brand specialty shovels

Super Shovel® tools have cutting teeth to penetrate hard-packed, rocky and clay soils. Also chop through roots and sod.

Irrigation shovels are used to easily dig vertical channels because of low lift angle.

Caprock irrigation shovels feature forged heads and low lift for near vertical digging. The solid shank provides exceptional strength.

Rice shovels are used for rice farming and irrigation. The perforations allow draining and ease of suction break.

MiniPRO™ shovels are rugged little shovels with a wide variety of home and commercial applications. Ideal for car trunks, camping, gardening, tight places, concrete work, and track cleaning on heavy equipment.

Trenching and clean-out shovels

Trench clean-out shovels with no step are economical tools for cleaning loose materials from trenches prior to laying wire, cable or pipe.

Trenching shovels with rear rolled steps can be used for light digging, as well as clean-out.

Trenching/clean-out shovels with front turn steps can be used for both trench digging and clean-out. The V-shape blade provides maximum blade strength and helps shape the trench bottom for best positioning of wire, cable, or pipe.

Lady Floral Tools

PREMIUM TOOLS FOR HANDS THAT MAKE THE WORLD MORE BEAUTIFUL

Lady Floral tools are the perfect fit for gardens, tight spaces and smaller hands. They are smaller, lighter, and easy to use, yet made from the same rugged materials as full-size tools.

Floral-size heads are made from tempered high carbon steel for superior strength. Models with forged heads provide the ultimate in durability.

Premium hardwood handles feature slim design for lighter weight and ease of handling. D-handle tools feature full-size poly D-grips for easy grip and comfort with or without gloves.

Seymour Garden Tools

PREMIUM TOOLS FOR HANDS THAT MAKE THE WORLD MORE BEAUTIFUL

Seymour developed these short-handled tools to better meet the needs of home gardeners who prefer more compact tools.

We added these four new tools have chrome plated heads with hardwood handles and a convenient hole to hang up when not in use.

They're durable and feel great in your hands.

Posthole diggers

Atlas pattern diggers are best suited for homeowner use and other occasional use applications.

Hercules pattern digger heads provide maximum strength for the most demanding industrial and commercial jobs.

Hercules Lonestar diggers feature strong tubular steel handles welded to thick yokes for digging in the hardest soils.

Buckeye diggers feature strong steel pipe handles welded to square steel shanks and yoke. Super-tough square-cut steel blades are ideal for digging in heavy, rocky soils.

Perfection pattern digger heads have unique "clamshell" heads for digging in sandy, loamy, loosely-packed soils.

Augers

Iwan augers are general purpose design for use in a variety of soils. Steel blades are riveted to tough malleable iron yoke. Steel shaft with a welded steel tee handle.

Adjustable Iwan augers will bore holes of varying diameters.

The tree feeding auger bores a 2" diameter hole for applying plant food and water to roots.

The Digwell auger has a telescoping steel handle for a total working length up to 8'6". The square steel extension is dimpled at 7" intervals for locking in settings.

STRUCTRON® brand extension handles

Fiberglass handle: Safety yellow reinforced fiberglass handles make Structron Superhandles strong, lightweight, and extremely durable.

STĀ-LOK® positive locking system: Patented design allows for variable locking position with maximum locking power.

Threaded metal tip: Solid aluminum-zinc alloy casting for greater strength. Standard 3/4" - 5 Acme thread design.

Microshield® surface: This non-stick surface, unique to Structron Superhandles, resists paint build-up for easier clean-up.

ProGrip™ comfort grip: Features double-wall construction for increased durability. Non-slip finish for a more secure hold.

SUPERHANDLE® 2000 DUAL LOCKING SYSTEM EXTENSION HANDLE

The world's first extension handle with two locking systems to ensure the most secure handle lock available today. Built to industrial quality standards for outstanding performance and durability.

Two-piece grip: Double-wall construction for increased durability. Features non-slip finish for a secure and comfortable hold.

Aluminum tip is strong and lightweight.

EXTERNAL LOCK: Screw down threaded collar to secure handle in any position. Comfortable ergonomic design.

INTERNAL LOCK: Twist inner pole with STĀ-LOK® positive locking system until it snaps into locking position to quickly secure handle at any length.

Snow tools and scrapers

Snow pushers are designed to push snow rather than lift and throw it. They allow the user to stand erect to minimize back strain and reduce fatigue.

Snow scoops, often called snow shovels, are designed to lift and throw snow.

Roof rakes are designed to remove snow, wet leaves, and other debris from roofs. They help prevent ice build-up and save costly repairs.

Snow tools and scrapers

SC-10 scraper: Good quality with promotional price point. Features a straight hardwood handle and a 2-piece steel ferrule.

SC-20 scraper: Professional quality with a tough malleable cast iron socket, high carbon blade, and contoured hardwood handle.

SC-30 scraper: Industrial quality with a 1-piece forged head and socket and a contoured hardwood handle.

SW7 scraper: Industrial quality with a 1-piece forged head and a rugged Structron fiberglass handle.

IC-30 ice chisel: Features a heavy-duty blade designed to chop and break even thick ice.

Scrapers are used for chipping and breaking ice on walks and drives as well as for general clean-up on construction sites and farms.

Ice chisels are heavy-duty tools designed specifically to chop and break ice.

Snow pushers are designed to push snow rather than lift and throw it. They allow the user to stand erect to minimize back strain and reduce fatigue.

Snow scoops, often called snow shovels, are designed to lift and throw snow.

Roof rakes are designed to remove snow, wet leaves, and other debris from roofs. They help prevent ice build-up and save costly repairs.

Contractor tools - Concrete, asphalt, and drain cleaning

SEYMOUR

THE WORLD'S BEST TOOLS!

STRUCTRON

The CM-30 concrete come-along features an 8" steel ferrule for strength and easy clean-up.

The MH-10 mortar hoe and AR-30 asphalt rake both have a long steel ferrule to provide extra strength and easy clean-up.

The AR-30 asphalt rake features a rugged 1/2 inch square shank for extra rigidity.

The AL-36 asphalt lute blade features notched tooth design for fast placement of asphalt, concrete, and other coarse materials and a smooth blade top for floating.

Contractor tools - Roofing, stoning and probes

Level head rakes have teeth designed to gather small weeds and straw. They are also ideal for raking small clods and for seedbed preparation while the flat side is used for leveling.

The SR-30 stone rake features a forged head with 14 heavy-duty straight teeth for spreading stone and other materials with a push-pull action.

The SG1 asphalt shingle remover is a professional quality tool that makes shingle and nail removal easier. Features an extra-strong steel brace and carbon steel skid plate. The 9" serrated steel blade is replaceable.

Roofing spades have a heavy-duty fulcrum welded to the back of the blade for leverage.

Wheelbarrows

Rugged poly wheel with ball bearings for longer life.

1
WB-4S

Heavy gauge seamless steel tray for contractor applications.

2
WB-6S

Our heaviest gauge seamless steel tray for heavy-duty contractor applications.

3
WB-6SHD

Knobby 4-ply tire for better traction, longer wear, and greater puncture resistance.

Cross braces improve lateral strength and stability.

4
WB-6SHDS

Strong steel handles.

Flat-free tire.

5
WB-6P

Heavy-duty channel steel front braces for added strength when carrying heavy loads.

7
WB-JR

Corrosion proof high-density poly trays for heavy-duty contractor and landscaping applications.

6
WB-10P

Dual wheels for added stability when carrying heavy loads.

Steel shoes provide added support and help prevent wear.

8
WB-JRB

Steel rack uses space efficiently to display 3 wheelbarrows.

Seamless steel trays with enamel finish provide excellent durability.

High-density poly trays are corrosion proof and lightweight.

Ball bearings with grease fittings (zirts) for easier rolling and longer life.

Pneumatic 2-ply tires for greater maneuverability.

Front tray braces and bottom cross braces provide added support, strength and stability.

Steel leg shoes provide added stability and longer life.

Rugged hardwood handles are seal coated for maximum moisture and weather resistance.

PREMIUM GRADE STRIKING TOOLS Hammers

Cross peen (blacksmith) hammers are used to strike and shape and bend unhardened metal. Also used to shape block, brick, and stone.

Drilling (hand drill) hammers are used to strike cold chisels, punches, star drills, brick chisels, and hardened nails. They are designed to deliver heavy blows with limited swing in tight spaces.

Engineers hammers (short handle sledges) are used to strike stone, concrete, metal, and wood. Often used to drive stakes and rods or move timbers. Short handles allow work in tight spaces.

- ❖ Chamfered edges
- ❖ Shock-absorbing American hickory or premium Structron fiberglass handles
- ❖ Hickory handles are turned-style for better contours and grips

Striking tools - Mauls & wedges

Wood splitting (woodchopper) mauls are used to split wood. The blade is designed to split rather than cut, and the heavy sledge-end adds power to the stroke. The sledge-end is also used to drive wood-splitting wedges.

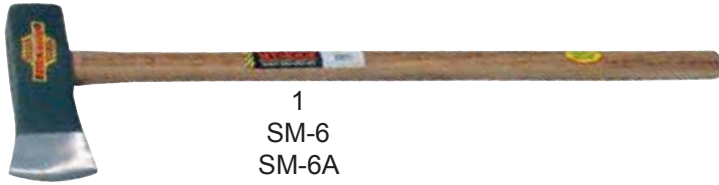

SLEDGE EYE

AXE EYE

Sledge eye and axe eye design

For splitting mauls, sledge eye design is the most widely used while axe eye design is preferred in some regions.

Striking tools - Picks & mattocks

Pick mattocks combine a pick blade with a mattock blade. They are used to dig or grub, especially in hard dirt or clay soils. The pointed pick blade can be used to loosen hard soil while the broader mattock blade is used to dig or remove loose soil.

- ❖ Forged steel heads
- ❖ Shock-absorbing American hickory or premium Structron fiberglass handles
- ❖ Hickory handles are turned-style for better contours and grips

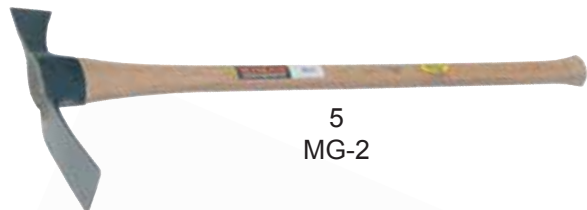

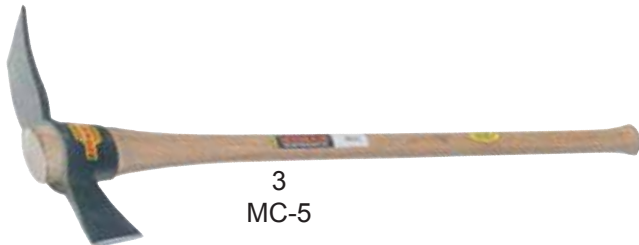

Cutter mattocks combine an axe-like cutter blade with a mattock blade. They are used to chop and dig, especially in hard dirt or clay soils.

The cutter blade can be used to cut roots and loosen hard soil. The mattock blade is used to dig or remove loose soil.

Garden cutter mattocks are light-duty versions of the heavier cutter mattocks. They combine an axe-like cutter blade with a mattock blade. They are used to chop and dig, especially in hard dirt or clay soils.

The cutter blade can be used to cut roots and loosen hard soil. The mattock blade is used to dig or remove loose soil.

Striking tools - Steel bars

San Angelo bars have a chisel head on one end and a diamond point on the other end. They are used to pry and dig.

1
DG-23

Pinch point crow bars have a slanted point. They are used to pry or move heavy objects and to split or separate wood, metal, or concrete forms.

2
DG-PP60

Wedge point crow bars have a wedge-shaped point. They are used to pry or move heavy objects and to split or separate wood, metal, or concrete forms.

3
DG-WP60

Posthole digger bars have a chisel head on one end and a tamper point on the other end. The chisel end is used to dig or loosen soil in postholes. The tamper end is used to pack the soil around posts that have been set in the holes. Also great for moving rocks from soil.

❖ Seymour steel bars are drop forged for superior strength

4
DG-19

Slate bars have a bent chisel head on one end and a diamond point on the other end. The chisel end is used to loosen slate in mines. The diamond point is used as a jack bar on track jacks.

❖ Convenient 1-packs for the longer and heavier bars

5
SB-48
SB-60

Wrecking (gooseneck) bars are used to pull nails and to pry apart wood. They have a nail puller head on the gooseneck end. The gooseneck provides leverage for heavy pulling. The other end has a bent chisel head for prying.

Scoops

Versatile grain scoops are ideal for moving grain, seed, feed, fertilizer, and other granulated materials. They are also used for snow removal.

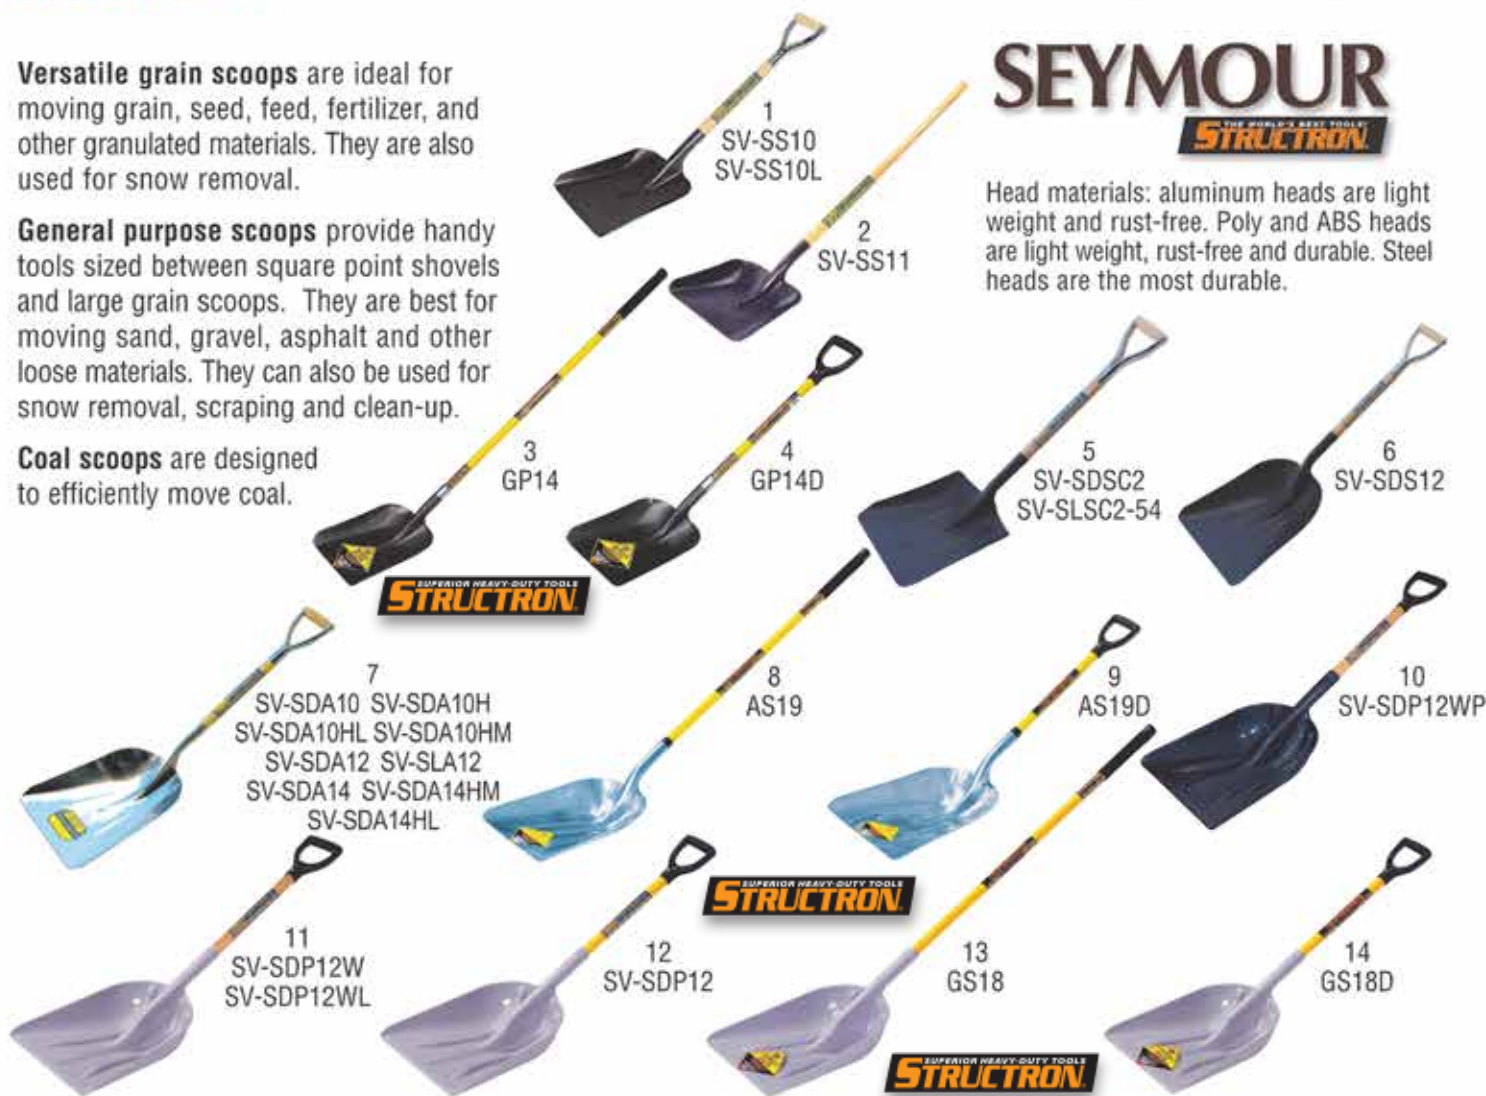

General purpose scoops provide handy tools sized between square point shovels and large grain scoops. They are best for moving sand, gravel, asphalt and other loose materials. They can also be used for snow removal, scraping and clean-up.

Coal scoops are designed to efficiently move coal.

SEYMOUR

THE WORLD'S BEST ONLY
STRUCTRON

Head materials: aluminum heads are light weight and rust-free. Poly and ABS heads are light weight, rust-free and durable. Steel heads are the most durable.

Forks

Spading forks are used to work loose soil, aerate sod, dig root crops, and transplant bulbs and plants.

Manure forks are designed to lift manure and other loose material without sifting.

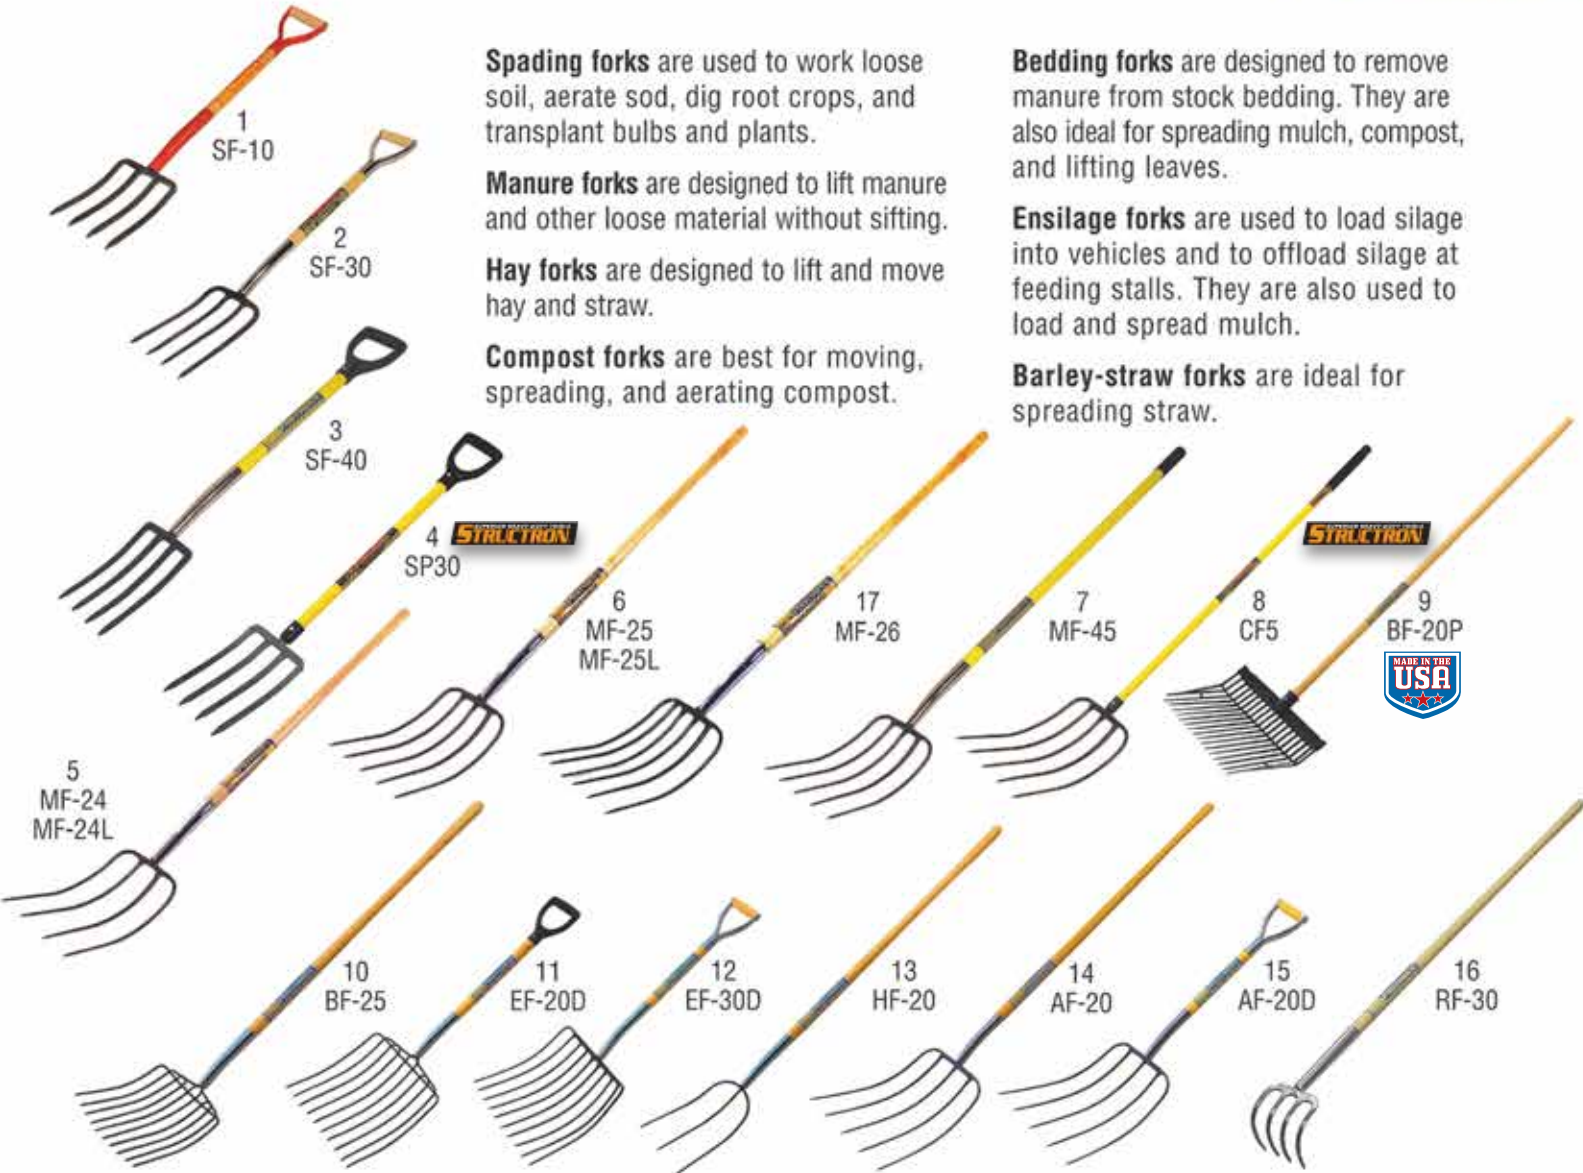

Hay forks are designed to lift and move hay and straw.

Compost forks are best for moving, spreading, and aerating compost.

Bedding forks are designed to remove manure from stock bedding. They are also ideal for spreading mulch, compost, and lifting leaves.

Ensilage forks are used to load silage into vehicles and to offload silage at feeding stalls. They are also used to load and spread mulch.

Barley-straw forks are ideal for spreading straw.

Specialty hoes

Eye hoes feature large heavy blades best for heavy-duty digging and cultivating.

Grub hoe blades are narrower than eye hoes for easier and deeper ground penetration.

Italian grape hoes are designed specifically for cultivating and weeding around grape vines.

Hardwood handles for eye hoes, grub hoes, and Italian grape hoes are sold separately.

Beet hoes or nurserymen's hoes are best for weeding, chopping, and making furrows. The sloping edges enable hoeing close to beet leaves.

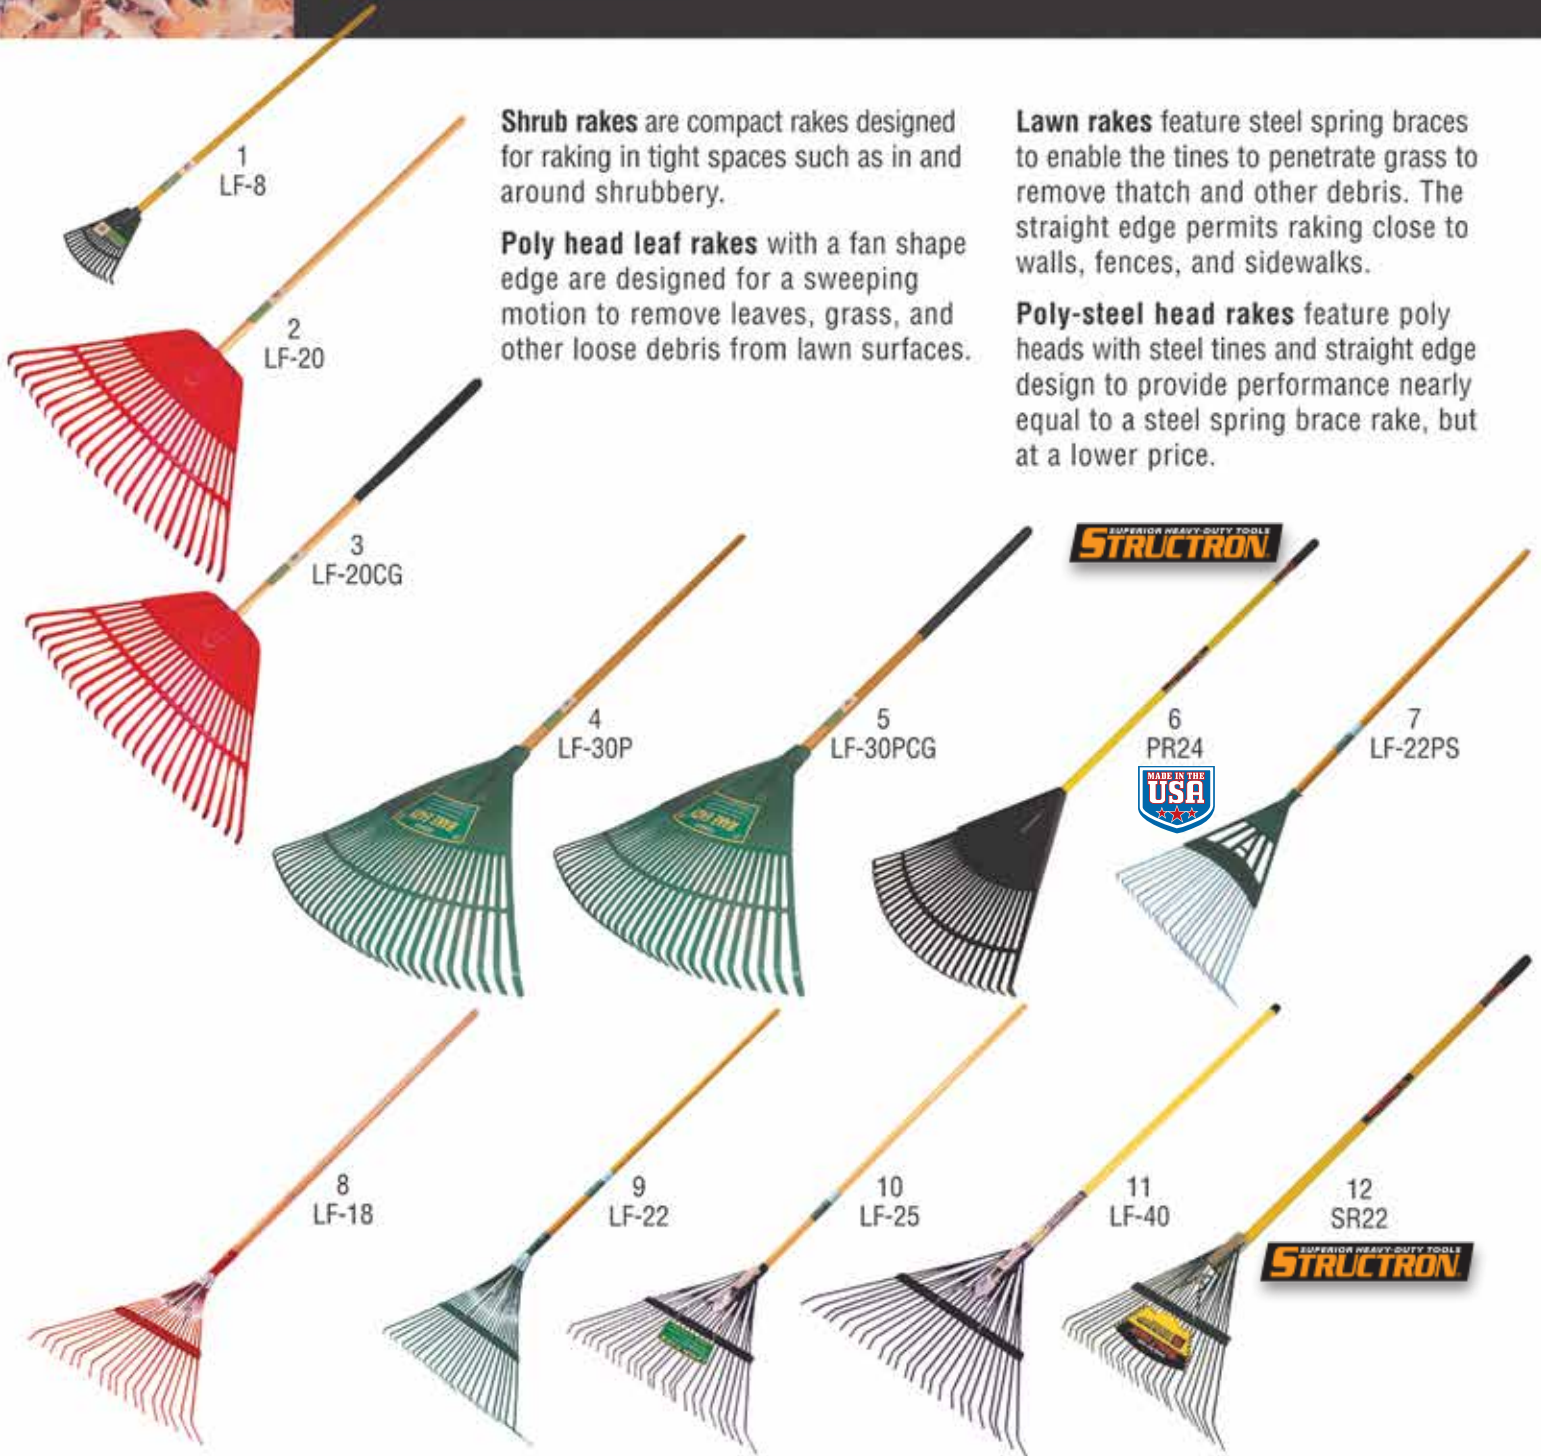

Southern meadow hoes, also called blackland or cotton hoes, are used for weeding and chopping.

Warren hoes or cultivator hoes have a triangular shape for making furrows and cultivating between plants. Sharp point enables use close to young seedlings. The "ears" on the back of the head are designed to pull the soil back onto newly planted seeds.

Lawn & leaf rakes

Shrub rakes are compact rakes designed for raking in tight spaces such as in and around shrubbery.

Poly head leaf rakes with a fan shape edge are designed for a sweeping motion to remove leaves, grass, and other loose debris from lawn surfaces.

Lawn rakes feature steel spring braces to enable the tines to penetrate grass to remove thatch and other debris. The straight edge permits raking close to walls, fences, and sidewalks.

Poly-steel head rakes feature poly heads with steel tines and straight edge design to provide performance nearly equal to a steel spring brace rake, but at a lower price.

Packaged ring fasteners

MADE IN THE USA

Hog rings are used to prevent swine from rooting in the ground. They are made from copper coated wire and come in various sizes.

Ring fasteners are used for fastening wire fences, slit fences, steel mesh for wall reinforcement, fish traps, crab pots, animal cages, upholstery, and attaching tags. They are also used to clamp rubber tie-down straps and for clamping rope. Seymour rings have a variety of uses in arts and crafts such as fastening holiday wreath materials.

Tab-top boxes: Packaged rings come in convenient tab-top boxes that make them ideal for effective pegboard merchandising. Each box holds from 25 to 100 rings depending on the size of the rings.

10-pack dispenser box: Packaged ring boxes are packed in convenient dispenser cartons with 10 tab-top boxes in each dispenser carton.

BULK RINGS

Bulk rings prices are listed in the price list and special order rings are available on a quotation basis. For special needs, just provide samples or specifications.

Rings are defined by wire gage or diameter, material properties and cost, pattern, and cut. The ring wire materials below are listed in order of relative cost, with the least expensive listed first. For best value, select the lowest cost material that has the properties needed for the intended application.

Bright basic steel rings are the most economical and are used for general purpose applications such as attaching tags.

Copper coated rings are economical and used for hog rings and general purpose applications.

Galvanized steel rings are best for applications such as fencing where moderate cost and resistance to rust are important.

Aluminum rings are relatively expensive, light weight and won't rust or corrode making them ideal for salt water use, cages and traps, and other special requirement applications.

Stainless steel rings are the most expensive and won't rust or corrode making them ideal for salt water use, cages and traps, food industry applications, and other special requirement applications.

Hill pattern rings close in a triangle shape.

Blair pattern rings close in an oval shape.

Prebent rings reduce the effort needed to close the rings thus reducing hand fatigue.

Rope tie pattern rings are ideal for clamping rope and cable.

Upholstery pattern rings are designed to hold fabric to furniture frames.

Slant cut rings are best for applications requiring penetration such as upholstery and hog rings.

Blunt cut rings are best for applications such as fencing. They have no sharp points to cut or pierce, making them safer to handle.

Non-offset rings close with the tips nearly touching. They are ideal for fastening large diameter materials such as fence wire where a small gap between the tips is OK.

Offset ring design allows the ring tips to pass for complete closure. They are best for fastening small diameter materials that could pass through a small gap.

FIRE STARTER

Fire pits, campfires, charcoal, and fireplace

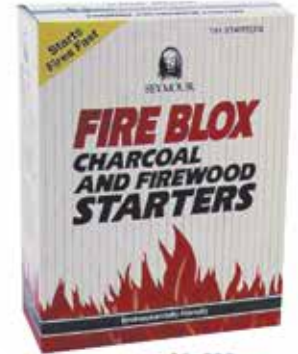

30-052

30-050

30-054

30-589

Here's why your customers will prefer Seymour FIRE BLOX™ over all other fire starters.

Fire Blox are superior to liquids and other solid starters.

Seymour Fire Blox have many advantages your customers will want. These benefits will bring them back - the repeat business you want and need.

Starts all types of fires

- Great for starting firewood, pellets, coal and charcoal.
- Works in both catalytic and non-catalytic stoves.
- Eliminates the need for liquids, kindling and newspapers.

Works great even after being submerged in water.

- Pieces burn hot for about 12 minutes for fast, sure starts.
- Lights quickly, even when wet.
- Will ignite even damp firewood.

Safe to use anywhere

- Can't leak, spill, flash, flare-up or explode.
- Eliminates dangerous second squirts of flammable liquids.
- Safe to use both indoors and outdoors.
- Non-poisonous.
- Stores safely anywhere and keeps indefinitely.

Economical - just pennies per light.

- Need only two or three pieces per start.
- A 24-piece package provides 8 to 12 starts, more than most starters.
- Pieces are scored and will separate easily so that just the right amount may be used.

Burns clean

- Meets the strictest air quality codes in the country.
- Certified as clean burning and approved for sale in California including the Los Angeles Area of Southern California.

Fire Blox packages

Packaged five ways to conveniently serve your customers.

30-050 Fire Blox carton, 24 starters.

30-052 Fire Blox, cello-pack, 24 starters.

- 8 ea. 30-573 Ash rake.
- 6 ea. 30-578 Black straw broom.

LINK HANDLES

MADE IN THE USA

Tool handles can be made from a variety of hardwoods as well as fiberglass and steel. Each material has certain advantages and disadvantages for replacement handles.

American hickory and ash

The best replacement handles are made from American hickory and American ash because of their strength, elasticity, and ability to absorb shock. Hardwood handles do not conduct electricity.

Shock-absorbing American hickory

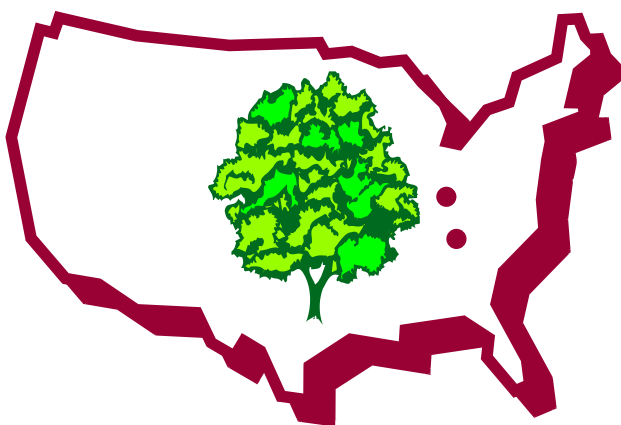

American hickory is dense, heavy, and a natural shock absorber making it ideal for striking and cutting tool handles.

The long fibers and unique cell structure of American hickory allow it to flex repeatedly and return to its original shape. It absorbs and dissipates shock before it reaches the user's hands.

The best hickory is grown in the Tennessee region of the USA

The best American hickory logs come from Tennessee, Kentucky, North Carolina, and South Carolina. This region has the ideal combination of soil minerals, rainfall, and sunshine to produce trees that grow slowly and uniformly for exceptional strength.

Proudly made in Indiana & Tennessee.

Wood from slower growing trees is denser and thus stronger than the lighter wood that comes from faster growing trees.

All Link hickory comes from the Tennessee region of the USA. Some hickory grows in the northeastern United States, but it is generally of lower quality than the hickory grown in the Tennessee region.

American ash handles for agricultural tools

Most agricultural tool handles such as shovels, rakes, and hoes are made from American ash. It has a uniform grain structure that provides both the strength and the elasticity needed for the bending stresses these tools must endure.

Other hardwoods

When ash or hickory is not used, other hardwoods suitable for the application are used.

For example, a leaf rake does not need a strong and expensive handle when compared to more demanding applications such as axes and shovels.

Fiberglass handles

Fiberglass handles are strong, lightweight, and do not conduct electricity. Fiberglass, however, is not flexible and does not absorb shock. Fiberglass handles cost more than hardwood handles.

Link has a line of eight fiberglass replacement handles.

Steel handles

Steel handles are extremely strong, but they are heavy and expensive. They are not flexible and do not absorb shock. Steel handles conduct electricity.

Link does not make steel replacement handles.

CUSTOMER SERVICE 800-457-1909

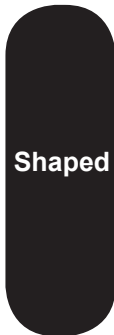

Turned handles are ergonomically superior to shaped handles

There are two ways to produce handles: shaping and turning.

Shaped handles are made from flat boards that are smoothed and rounded on the top and bottom. Shaping is a faster and less costly way to make handles. They can provide good value for occasional use applications.

Turned handles are made on a lathe from wood blanks that are about 25% larger than the flat boards. The result is a handle that has better grips and contours.

Anyone who holds a shaped handle and then a turned handle will immediately feel the higher quality of the turned handle.

Shaped

Turned

Superior ergonomic design

Link handles are designed with the best combination of length and contours so the user can best hold the handle and use the tool.

The handle shape works with the users, and the handle becomes an extension of their bodies to provide better comfort, control, and safety.

The best quality replacement handles are turned rather than shaped. Turning handles from wood squares results in ergonomically superior handles that provide better comfort, control, and safety.

STEPS IN MAKING A TURNED AXE HANDLE

1. Start with an axe wood square or blank.

2. Half turned axe handle.

3. Full rough turned axe handle.

4. Axe handle after sanding.

5. Finished axe handle with label and wedge.

All handles are carefully graded and sorted

Link’s experienced timber buyers grade log quality. They are looking for logs that are heavy and defect-free.

When the logs are sawed into squares (or blanks), the squares are graded. After the squares are turned into handles, they are graded again.

Primary log quality factors

Some of the factors used to determine quality include:

- Straightness of grain
- Moisture content
- Density
- Freedom from defects

Wood color not a quality factor

Color of the wood is not a factor in determining the quality of hickory handles. The best hickory handles may be all white, red-and-white, or all red.

Link American hickory quality levels

01 Best quality American hickory with sanded finish and yellow non slip grip. Meets or exceeds all government “A” specifications. Ideal for the most demanding industrial and commercial applications.

02 Best quality American hickory with a wax finish. Meets or exceeds all government “A” specifications. Ideal for the most demanding industrial and commercial applications.

04 Better quality American hickory with a wax finish. Ideal for frequent heavy-duty use by farmers, ranchers, contractors and other professionals with demanding construction and other professional applications.

19 Better quality American hickory with a clear lacquer finish. Fire finish provides a highly pleasing appearance. Ideal for frequent heavy-duty use by farmers, ranchers, contractors and other professionals with demanding construction and other professional applications.

08 Good quality American hickory with wax finish. These handles provide exceptional value and economy for homeowner and other occasional use applications.

Link American ash quality levels

18 Best quality American ash with a clear lacquer finish. Ideal for the most demanding industrial and commercial applications.

21 Better quality American ash with a clear finish. Ideal for frequent heavy-duty use by farmers, ranchers, contractors and other professionals with demanding construction and other professional applications.

SUMMARY OF LINK QUALITY LEVELS

Quality level #	Quality level	Type of finish	Special features	Govt. specs	Suggested use
AMERICAN HICKORY					
01	Best	Sanded	Non-slip grip	A	Industrial, commercial
02	Best	Wax		A	Industrial, commercial
04	Better	Wax			Contractor, professional
19	Better	Clear lacquer	Fire finish		Contractor, homeowner
08	Good	Wax			Homeowner
AMERICAN ASH					
18	Best	Clear lacquer			Industrial, commercial
21	Better	Clear lacquer			Contractor, homeowner

AXE AND BUSH HOOK HANDLES

LINK12HD	12-hook display, pegboard wall mount, 24" wide
LINKFSD	Floor stand for wall mount displays

Pallet merchandisers

Colorful floor displays can double or triple your inventory turns by attracting customer attention and using space efficiently. Great for end caps, sidewalk displays, and seasonal merchandise.

No set up required. They come fully loaded with a removable protective outer wrap. They are attached to wooden pallets for ease of handling.

Many options are available with a variety of long handle tool assortments. Custom tool combinations and private label are possible.

Full pallet merchandisers are 40" wide and 48" deep.

Half-pallet merchandisers are 40" wide and 24" deep. Fewer tools than full pallets for quick inventory turns.

Quarter pallet merchandisers are 20" wide and 24" deep.

Wood pallet displays are 34" wide and 34" deep.

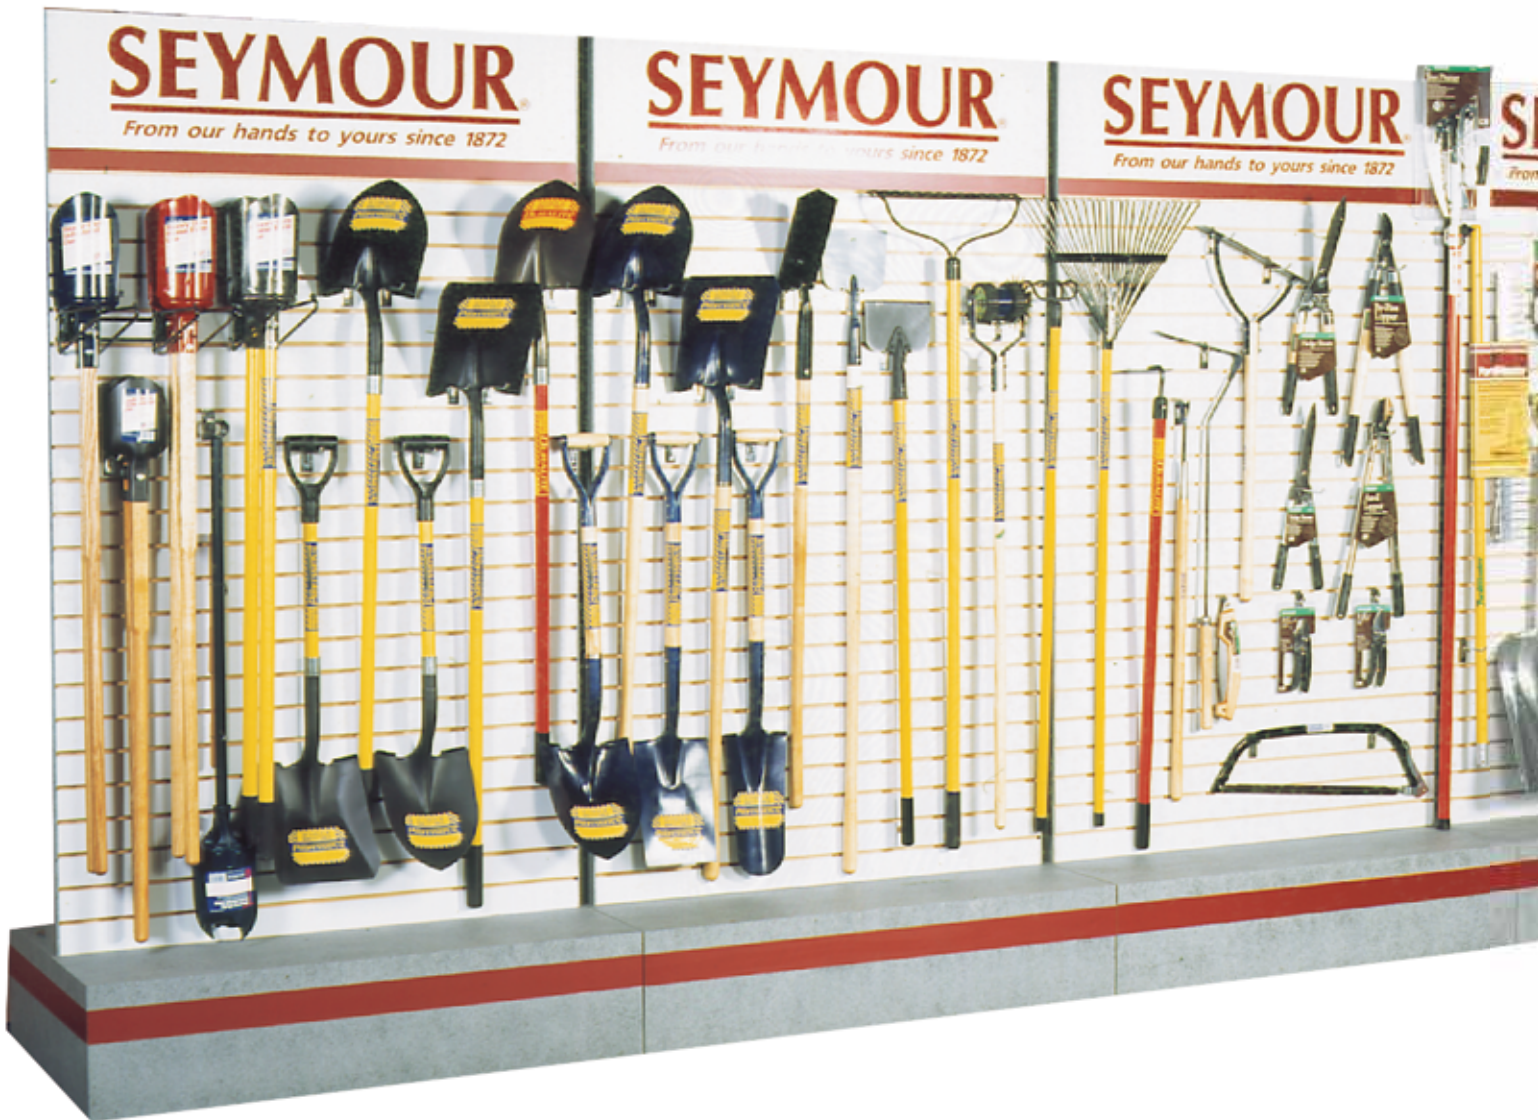

SEYMOUR

SEYMOUR'S WALL OF FAME

Custom planograms use space efficiently and maximize impact

We custom-design planograms to meet customer needs from filling a narrow niche to completing a wide wall of tools. Careful planning ensures that premium wall space is used for maximum customer impact and sales potential.

Pegboard hangers display products to best advantage

Seymour premium quality pegboard hooks and hangers are custom-designed to display Seymour products to their best advantage.

Seymour Wire Fixtures

PH-2DG Two digger hanger.
Space saving front load design holds 2 post hold diggers.

PH-WF3 Waterfall hanger.
Ideal for long handle tools such as shovels and rakes. Holds 3 tools.

PH-WF6 Waterfall hanger.
Ideal for long handle tools such as shovels and rakes. Holds 6 tools.

PH-PR2 Weeder/pruner holder.
Designed to hold loppers, hedge shears and bow saws horizontally.

SEYMOUR

FOR THE WORLD'S BEST TOOLS
STRUCTRON

SR2

Rolling steel merchandiser

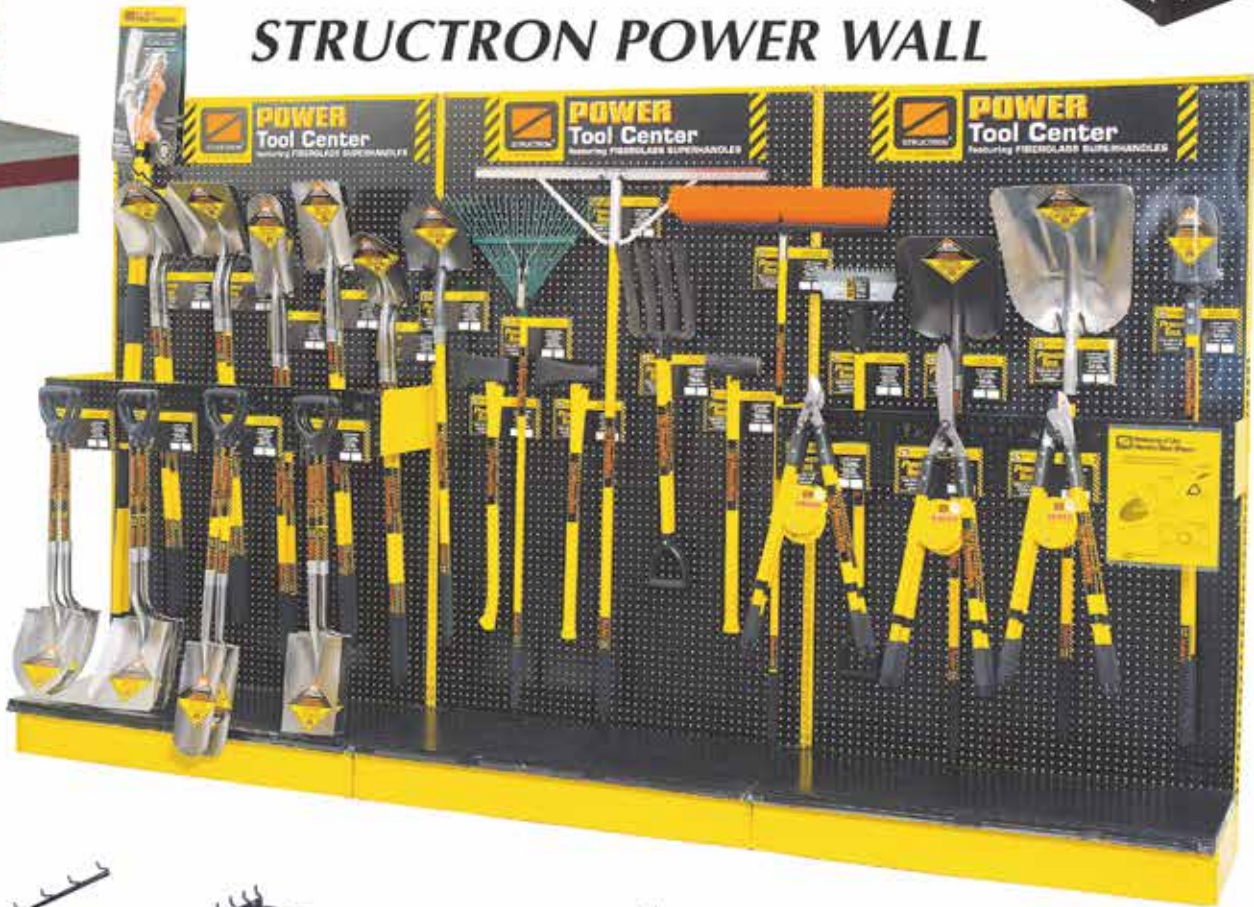

Holds 48 shovels, rakes, and hoes or 24 posthole diggers. Will hold both long handle and D-handle tools. Can be used indoors or outdoors.

SS1

Steel merchandise racks attract customer attention, display tools effectively, and use space efficiently. Versions with wheels can be easily moved indoors or outdoors for product-moving promotions.

STRUCTRON POWER WALL

PH-HH Hoe hanger.
Designed specifically for garden hoes and mortar hoes. Also great for bow saws.

PH-11D 11" double hook.
Best hook for D-handle tools.

PH-10S 10" single hook.
Ideal for tools and cards with a single hanging point.

The proof is in the packaging

Informative labels, tags, and packages help your customers make informed choices.

Replacement parts - Complete information and prices for replacement parts for Seymour and Strcutron products are listed in the Seymour Lawn & Garden Tools Price List.

Universal rolling steel merchandiser

This versatile merchandiser can effectively display 40 to 100 tools in a wide variety of combinations. Holds both long handle and D-handle tools. Can be used indoors or outdoors.

Fireplace tools and accessories

Seymour has a complete line of fireplace accessories including firesets, screens, log baskets, grates, rugs, bellows, brooms, fire starters, coal hods, ash buckets, hearth gloves, and other hearth products. To order a fireplace products catalog, call 800-457-1909.

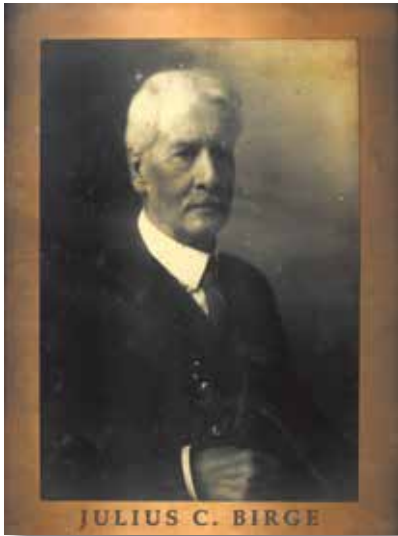

A proven steel merchandiser for fireplace tools and accessories

The Seymour fireplace display is a successful point-of-purchase display for a variety of best-selling fireplace tools and accessories. The all-steel fixture comes complete with shelves, hooks, and a sign. Only 2 feet wide and 9 inches deep. Display is free with purchase of merchandise assortment.

Vinyl bags provide attractive pegboard and slatwall merchandising and customer protection.

JULIUS C. BIRGE

The Seymour Manufacturing Company of Seymour, Jackson County, Indiana, was organized for manufacturing grain cradles, buggy and wagon wheel spokes and hubs, scythes, and snaths.

The Company began as a corporation in 1872 with principal offices in Wilmington, Delaware; Seymour, Indiana; and St. Louis, Missouri. This organization took place only one year after a group of local businessmen purchased a snath,

grain cradle, and wagon spoke factory that had been operating in the old Indiana State Prison located in Jeffersonville, Indiana. The original group consisted of Julius C. Birge, Walter W. Birge, Ernest N. Birge, Arthur B. Birge, Lynn Faulkconer (whom later built the Lynn Hotel), Charlton A. Swope (whom donated the Art Gallery to the library building), and William M. Ayer.

Julius C. Birge (seen above), of St. Louis, Missouri, who headed the group of local businessmen, purchased stock in the local corporation to diversify his services in the West. After several years of operation, Julius assumed control of the company through stock purchases, and the local industry has been in the hands of the Birge family since that time.

The Company expanded its operation through the years, at first continuing the manufacture of snaths, grain cradles, and wagon spokes, but in the early part of the 20th Century, the Hall Manufacturing Company of northern Indiana was purchased which added posthole diggers and earth augers to a growing line of products.

In 1922, the Company purchased the Dunn Edge Tool Company of Oakland, Maine, and moved that operation to Seymour, Indiana. Shortly after this move, Stanley J. Birge, the son of the founder, joined the Company. A year later, the North Indianapolis Cradle Works was purchased and was moved to Seymour, Indiana.

In 1940, during the years of World War II, Seymour Manufacturing again expanded its production capabilities by adding hog rings and ringers, barnyard tools and other agricultural tools to its offerings that the public demanded. To help with the war effort, Seymour Manufacturing produced starter cartridges for airplanes, and magazines for small arms and wooden wheelbarrows that required minimal metal for assembly.

During the next few decades, the Company continued to expand products and facilities to include cattle dehorners, a snow sled for children called the "Flying Cloud" and other digging tools. The Company also began shipping product to all parts of the United States, Canada, and many foreign countries, which continues today.

In 1956, the Company started its fireplace accessory business with the addition of the "Seymour Classic" fire set that is still manufactured with the same quality and good old-fashioned craftsmanship, for which the Company has become famous. During the next thirty years, the Company continued to acquire other tool manufacturers and continued expanding the operational facilities.

In 1995, Seymour Manufacturing Company acquired the **Structron Corporation** of San Marcos, California. Structron is the premier manufacturer of pultruded fiberglass composite plastics. Although the Structron Corporation produced many different profiles for customers around the world, it is perhaps best known for manufacturing handles for stronger, lighter-weight, and more durable hand tools

In 2004, Seymour Manufacturing Company acquired the **O.P. Link Corporation**, which included the O.P. Link Company of Salem, Indiana, the Sequatchie Handle Works of Sequatchie, Tennessee, the Bruner-Ivory Company of Hope, Arkansas, and the Turner-Day Handle Company of Crossville, Tennessee.

For over one hundred forty years, Seymour Manufacturing Company has continued to add new products and product lines until today; with over 3000 different products available for shipment, the Seymour Manufacturing Companies are able to offer World-Class service to thousands of customers worldwide.

In 2012, Seymour Manufacturing Company was purchased by Midwest Rake Company LLC, a family-owned and also Indiana based manufacturer of specialty tools serving a variety of markets worldwide. Midwest Rake products are sold under the Midwest Rake®, Kenyon, Northstar and Toolite® labels. Midwest Rake is also known for its OEM and private label capabilities. The combined breadth and diversity of the Seymour and Midwest Rake product lines will afford customers of both companies many new and meaningful opportunities going forward.
